

Fleet Unit Load Devices

With access to the entire Qantas fleet, along with Jetstar, plus our global alliance and interline airline agreements, your freight can be delivered to just about any airport in the world.

Unit Load Devices (ULDs) are the pallets and containers used to safely transport freight in our aircraft. They allow a large volume of cargo to be bundled into a single unit. Qantas has more than 16 types of ULDs in our global fleet that are available for your use.
